S172 statement

Company directors are required by law to promote the success of their organisation for the benefit of all stakeholders, including employees, customers, suppliers, and the broader community.

This statement aligns to such requirements, as set out in Section 172 of the Companies Act 2006 (the Act). It indicates how, during the year, our Board addressed the matters set out in Section 172(1) (a) to (f) of the Act when performing their duties:

- likely consequences of any decisions in the long-term;
- interests of the company's employees;
- need to foster the company's business relationships with suppliers, customers, and others;
- impact of the company's operations on the community and environment;
- desirability of the company maintaining a reputation for high standards of business conduct;
- need to act fairly between members of the company.

To avoid duplication, it incorporates information from Eisai's Value Creation Report. By considering Eisai's corporate concept *hhc*eco (*human health care* ecosystem), together with strategic priorities and having a process in place for decision-making, the Boards of Eisai networked companies (Eisai Europe Limited (EEL) - Eisai Manufacturing Limited (EML) and Eisai Limited(ESL)) ensure their decisions are consistent and meet the above factors.

This approach allows the Boards of EEL, EML and ESL to build trust and fully understand the potential impacts of the decisions they make on all our stakeholders. Our engagement with Eisai's main stakeholder groups, including our patients, employees, partners/academia, suppliers, the broader community are summarised in Table A.

The Boards review matters relating to financial and operational performance; business strategy; key risks; stakeholder-related matters; compliance; and legal and regulatory matters, over the course of the financial year. This is supported through the consideration of reports and presentations provided throughout the year.

Eisai's governance structure and processes are summarised in the Corporate Governance section of the Value Creation Report. The summary highlights how the Boards consider all relevant matters in reviewing the likely consequences of any decisions in the long term by undertaking robust long-term business plans, planning for the future of the business in 2023 and over the next seven years to 2030.

Eisai takes its compliance obligations very seriously. Compliance and ethical behaviour are critical to ensuring Eisai lives up to its corporate objective and all employees are required to support the company with this. Each employee reaffirms their commitment to compliance, ethics, and patient safety annually via training and certification.

More information on the issues and factors that the Boards consider relevant to complying with Section 172(1) (a) to (f) of the Act can be found on our website **www.eisai.eu**.

Stakeholder engagement

Engaging and building trust with the broad range of stakeholders that interact with, or are impacted by, our business is key to delivering our strategy and ensuring our success over the long term.

Details of how the Directors of Eisai networked companies, including EEL, EML, and ESL, engage with these stakeholders to support oversight and decision making is set out in the below table. The table highlights our key stakeholder groups, what matters to them and how we engage with them on a regular basis.

Table A: Stakeholder engagement

Stakeholders	What matters	How we engage
Patients	Medicines based on patient needs	Discussion groups
Insights from	Reliable supply of efficacious and	Patient research for medicines and
patients are core	safe medicines	disease awareness initiatives
to ensure we
